AMENDMENTS TO THE SPECIFICATION

On page 22, please replace the first paragraph with the following paragraph:

--target work actively, the masseter muscles independently of the target work actively and giving the result of recognition to the above-mentioned stress judgment module 35. In this case, a camera 36 is placed to face the test subject, video image date from the camera 36 is fetched by the PC 20, and the off-target work actively recognition module 34 visually recognizes the chewing or speaking condition from the fetched image data and recognizes the condition of either of chewing and speaking actions. In this case, either the chewing action or the speaking action can be recognized as a predetermined work actively using the masseter muscles independently of the target work actively.
